

CS102: Lab 1

Do the following using GNU/Linux commands that we discussed in the class.

1. Create a folder with the name CS102 in your root/home directory
2. Create two text files with the names sample1.txt and sample2.txt in folder CS102
3. Enter the following data for both the files:

Sample1.txt:

This is my first sample file.

Sample2.txt:

This is my second sample file.

This is created to test Linux commands. This will be used for testing.

4. Create another directory named Practice inside folder CS102 that we created in Question 1.
5. Move the file Sample2.txt from CS102 to its subdirectory Practice.
6. Move the files from the Practice subdirectory to your home directory
7. Copy the contents of file Sample1.txt from its current directory to the subdirectory practice with the name sample_try.txt

Submissions Guidelines

Your TAs will verify this in your machine when they meet you nextweek.
